

# PRESENTATION LIST

1	Hamid Beddani	An Existence Study for a Tripled System with $p$ -Laplacian Involving $q$ -Caputo Derivatives
2	Kheiraldine Bircou	Existence and Nonexistence of Positive Solutions to A Fractional Parabolic Problem with Singular Weight at The Boundary
3	Abdelatif Ouliana	Analysis and Applications of The Proportional Caputo Derivative and Integral
4	Merve Kara	On A Solvable System of Rational Difference Equations of Higher Order
5	Merve Kara	On Eight Solvable Systems of Difference Equations in Terms of Generalized Padovan Sequences
6	Seyf Edine Ghemini	On The Boundary Observability and Controllability of The Wave Equation in Some Non-Cylindrical Domains
7	Baqak Bar Akbulut	The Attitudes and Self-Efficiencies of High School Students Continued the Distance Mathematics Course Against Distance Education During the Covid-19 Pandemic
8	Chahra Kechar	Existence and Uniqueness Results for Nonlinear Hybrid Implicit Caputo-Hadamard Fractional Differential Equations
9	Ahlem Yahiaoui	On The Asymptotic Behaviour of a Non-Local Eigenvalue Problem
10	Abdelkrim Maherni	Trellis Theory and Some New Results
11	Okan Durmen	On The Controllability of Some Systems on Lie Groups
12	Randa Chalokh	Solving The Absolute Value Equation Based on A New Smoothing Function
13	Chahna Soudi	Schauder and Banach Fixed Point Theorem for Semilinear Fractional Problem
14	Ahlem Merah	Global Non-Existence of Solutions for A Nonlinear Viscoelastic Plate Equation with A $P(X, T)$ -Laplacian Operator in The Presence of Time Delay
15	Saada Hamouada	Growth of Solutions of Linear Fractional Differential Equations with Polynomial Coefficients
16	Zahira Khattab	Limiting Spectral Distribution of Large Dimensional Random Matrices of Linear Processes
17	Imane Boulmerka	Blow Up of Solution of a Nonlinear Wave Equation with General Source and Damping Terms
18	Samia Ghaila	Non-Autonomous Iterative Differential Inclusion
19	Rania Yahia	Stabilization for Wave Beam Equation with A Local Degenerated Kelvin-Voigt Damping
20	Saada Hamouada	Growth of Solutions of Linear Fractional Differential Equations with Entire Coefficients
21	Banhadri Mimla	Sufficient Conditions for Global Asymptotic Stability of a Kind of Nonlinear Neutral Differential Equations
22	Nadjah Kerouil	Dynamical Behavior of a Differential-Algebraic System with Fractional Order
23	Fatmi Tag	Historical-Philosophical Development and Teaching of Mathematical Objects
24	Engin Ozkan	Some Aspects of Interchanging Difference Equation Orders
25	Merve Ersoy	Universal Covering of a Lie Group
26	Karima Lasubli	Rational Decay Rate for The Wave Equation with Non-Neglected Density
27	Hanane Chaoual	Semi Continuous Perturbations for Nonconvex Sweeping Process
28	Zeynep Şanlı	Simpson Type Inequalities for Katugampola Fractional Integral
29	Kadirhan Polat	A Note on $L$ and $R$ Topologies
30	Fatima Fennour	Non-Convex Valued Perturbation of First-Order Problems with Maximal Monotone Operators
31	Siham Smeta	A Dynamic Electroviscoelastic Problem with Thermal Effects
32	Nassima Anane	On Unique Solvability and Picard's Iterative Method for Absolute Value Equations
33	Raouf Ziadi	A Derivative-Free Algorithm for Continuous Global Optimization
34	Tatiana Todorova	Diophantine Approximation by Prime Numbers of a Special Form
35	Sabah Balbeche	Well-Posedness and Energy Decay of Swelling Porous Elastic Solids with A Second Sound and Distributed Delay Term
36	Halima Hamdi	Cohen Positive Strongly $P$ -Summing $M$ -Homogeneous Polynomials from A Tensor Viewpoint
37	Laila Benziane	Analysis of An Electro-Elastic Contact Problem with Wear and Unilateral Constraint
38	Samaïr Shabanifar	The Study of Pre-Service Mathematics Teachers' Approach on Students' Misunderstandings for Four Possible Answers to Solve a Problem
39	Onur Karaoglu	Comparison of Two Effective Methods on Numerical Solutions of Differential Equations
40	Imene Mecamma	Truncated Condition for Second Order Perturbed Sweeping Process
41	Ozlem Tekin	On Quasi Ideals of Nearness Semigroups
42	Sabina Djebara	Berge Equilibrium in Random BI-Matrix Game
43	Ilker Gençtürk	The Dirichlet Problem for The Polyanalytic Equations in A Ring Domain
44	Hocjer Merad	Resolution A Problem of Quantum Mechanics in Fractional Dimensional Space
45	Selahattin Kiling	Locally $\mathcal{I}$ - Connectedness
46	Yılmaz Ekinci	A Finite Difference Scheme for Singularly Perturbed Neutral Type Differential Equations
47	Şevket Öncü	A Numerical Approach for System of Ordinary Differential Equations
48	İbrahim Gökcen	Number of Spanning Trees in Generalized Farey Graphs
49	Fatma Aybike Çuha	Solving Abel's Integral Equation by Kashuri Fundo Transform
50	Ilyes Sedka	Unlike Classical Processes, Linearizing First, Then Discretizing Is the Better Process to Solve Systems of Nonlinear Integral Equations
51	Lynda Mezghiche	Existence and Uniqueness of Positive Periodic Solutions for A Kind of First Order Neutral Functional Differential Equations with Variable Delays
52	Nadjet Balaïtrach	Under Truncated Random Data, Nonparametric Relative Error Estimation Via Functional Regressor Using the $K$ Nearest Neighbors Smoothing
53	Nora Fetouci	An Existence Result for A Class of Nonconvex Second Order Differential Inclusions
54	Mustapha Ali Hammou	Differential Equations of Divergence Form by Topological Degree in Musielak-Orlicz-Sobolev Spaces
55	Sawal Işık	Immigration and Qualitative Behavior of a Two-Dimensional Discrete-Time Model
56	Merve Khemis	Existence, Uniqueness, and Stability Results for A Neutral Mackey-Glass Type Delay Differential Equation with An Iterative Production Term
57	Ercan Civnen	A Numerical Approach for A Class of Singularly Perturbed Differential-Difference Equation
58	Ahmet Demiroz	Differential Entropy of Continuous Distributions
59	Fatma Aybike Çuha	Solving One-Dimensional Bratu's Problem Via Kashuri Fundo Decomposition Method
60	Aygenur Uçar	Darboux Frame with Respect to Generalized Fermi-Walker Derivative
61	Aygenur Uçar	Generalized Fermi Derivative on Surfaces in Euclidean 3-Space
62	Aygenur Uçar	Generalized Fermi Derivative with Regart to Hypersurfaces
63	Emrah Yıldırım	Some Completely Monotonicity Properties and Related Inequalities Involving $K$ -Trigamma and $K$ -Tetragamma Functions
64	Umit Sarp	Centered Polygonal Numbers and Polygonal Numbers
65	Muhammed Syam	$B$ -Spline Method for Solving Fractional Delay Differential Equations
66	Emrah Polatlı	Generalized Fibonacci Polynomials Associated with Finite Operators
67	Nouha Boujelida	Existence Problem for First Order Evolution Inclusion
68	Ahmet Emin	Simultaneously Square and Centered Square Numbers Related with Pell and Lucas Numbers
69	Mohammed Drissel-Alami	The Drazin Inverse for Closed Linear Operators
70	Selin Erdal	Durrmeyer-Type Generalization of Some Linear Positive Operators
71	Abir Bouinaïma	Local Existence of Solutions for A Quasilinear Hyperbolic Equation Involving The $p$ -Laplacian Operator
72	Nazhan Yezioğlu	A New Generalization of The Min and Max Matrices
73	Merve Ince	Some Fixed-Point Results in Soft Fuzzy Metric Spaces
74	Riadh Hadji	A Generalized Exponential Expansion Method to Simulate Two Third-Order Kdv-Type Equations
75	Asma Leulmi	Comparative Numerical Study Between Line Search Methods and Minorant Functions in Barrier Logarithmic Methods for Linear Programming
76	Sarra Leulmi	Local Linear Estimation of a Conditional Quantile for Randomly Censored Functional Dependent Data
77	Douaa Hamri	Non-identical Chaotic Fractional Order Systems: Adaptive Feedback Control and Synchronization
78	Murat An	Modelling of Pancreatic $\beta$ -Cells with Gap-Junction
79	Necati Can Açıkgöz	Some Density Properties in Bitopological Context
80	Omar Kchit	On Integral Bases and Monogeneity of Certain Pure Number Fields Defined by $3X^4[PAR]-4S$
81	Ceren Gürbüz	Mathematical Model of COVID-19 with Imperfect Vaccine and Virus Mutation
82	İbrahim Dahl	Existence Result of a Capacity Solution for A Nonlinear Parabolic-Elliptic System
83	Souheib Merad	Some Fixed-Point Theorems for A Generalized Cyclic $(\mathcal{A}, F, \phi, \psi)$ -Contractive Mapping in $B$ -Metric-Like Spaces
84	Nihal Öztürk	Analyzing Neimark-Sacker Bifurcation and Stability for A Discrete-Time Prey-Predator Model with Allee Effect
85	Houda Boughaba	On The Relationship Between The Degree of Coefficients and The Growth of Solutions of Ultrametric $Q$ -Difference Equations
86	Tayfun Ünal	Numerical Solution of Simple Mechanical Systems with Deep Learning
87	Derbal Louza	A New Primal-Dual Interior-Point Algorithm for Linear Programming.
88	Ozlem Kaytmaz	Uniqueness of Solution of An Inverse Problem for The Ultrahyperbolic Schrödinger Equation
89	Yousra Bouhanouche	Complexity Analysis of a Primal-Dual Interior-Point Method for Convex Quadratic Optimization Based on A New Hyperbolic Kernel Function
90	Ömer Demirci	Examining The Perceptions of Anatolian Vocational High School Students on Mathematics Through Metaphors
91	Wafa Mhaouia	Relative Cohomology Spaces for Some $\text{osp}(n 2)$ -Modules
92	Sourmia Saleh	A Class of Differential Inclusions Involving an Antimonotone Condition
93	Meryem Şenocak	Fixed-Point Theorems in Extended Fuzzy Metric Spaces Via Some Fuzzy Contractive Mappings
94	İsmet Gökgeyten	Solvability of An Inverse Problem for A Kinetic Equation on A Riemannian Manifold
95	Ali Uğur Sazaklıoğlu	A Finite Difference Method Based on The Operator for The Numerical Solution of An Inverse Source Problem Backward in Time
96	Cheddour Ayoub	Feedback Stabilization of Bilinear Systems
97	Amel Dlimi	Groups Whose Proper Subgroups of Infinite Rank Are Hypercentral-By-Finite
98	Elif Güner	Generalized Spherical Fuzzy Hamacher Aggregation Operators
99	Seher Aslanlı	Inquiry-Based Learning: A Bibliometric Analysis
100	Seher Aslanlı	On deformed lifts
101	Tane Vergil	Homotopy and Descriptive Homotopy in Computational Proximity
102	Zeynep İğdallı	Examination of Preservice Teachers' Mathematical Thinking and Modeling Skills
103	Şeyda Kitiçoğlu	On The Cosine Curve As 4th and 6th Order Bézier Curve in $E^3$
104	Meryem Sadiqi	Existence and Multiplicity Result for General Steklov Problem
105	Muhammed Hasdemir	A Solution Algorithm for An Inverse Problem for The Kinetic Equation Which Involves Poisson Bracket
106	Kadirhan Polat	A note on $L$ and $R$ topologies
107	Bilgin K Jose	A Characterization of Open Distance Pattern Uniform Chordal Graphs and Distance Hereditary Graphs
108	Zeynep Bulbul	Associated Curves of a Framed Curve in Euclidean 3-Space
109	Gökhan Murncu	A New Approach Tubular Surface with A New Frame in $G_3$
110	M. Mohan Raja	Approximate Controllability Results for Caputo Fractional Volterra-Fredholm Integro-Differential Systems of Order $1 < \alpha < 2$
111	Fouad Miri	Liouville Theorems for Stable at Infinity Solutions of Lane-Emden System.
112	Fatma Karakulug	Parallel Transported Along Dual Lorentzian Spacelike and Timelike Curves
113	Ahmed El Idriesi	Uniform Well-Posedness and Stability for Fractional Navier-Stokes Equations with Coriolis Force in Crutier-Bevy-Morrey Spaces
114	Meryem Bouzerailb	Symmetric Functions for $(p, q)$ -Numbers and Pell Lucas Polynomials
115	Meltek Eris Buyukokaya	On Predictors of Partial Parameters Under a Partitioned Linear Model and Its Reduced Models
116	Derya Avci	Optimal Control of a Fractional SIR Model Under the Effect of Nonlinear Incidence and Recovery Rates
117	Ahléme Bouakkaz	Existence and Uniqueness Results for A Revisited Nicholson's Blowflies Model with Two Different Variable Delays and A Nonlinear Harvesting Term
118	Imane Bouazza	Recursive Double Kernel Estimator of The Conditional Quantile for Functional Ergodic Data
119	Fares Yazid	General Decay of Solutions in One-Dimensional Porous-Elastic System with Memory and Distributed Delay Term with Second Sound
120	Rabah Khemis	Some New Results on Periodic Solutions for A Periodic Delay Hematopoiesis Model with A Unimodal Production Function
121	Safa Chaouf	Existence, Uniqueness, and Stability of Solutions for A First Order Iterative Functional Differential Equation
122	Kubra Özkan	Some Fixed-Point Theorems on $O$ -Complete Metric Spaces
123	Berna Yildizhan	An Examination of The Conceptual Knowledge of Teacher Candidates in The Elementary Mathematics Program Regarding The Concept of Ratio
124	Sedatür Kaksal	Investigating The Impact of Bariatric Surgery on Lipid and Glucose Absorption Via Mathematical Modeling
125	Gülşen Gün Polat	Jacobi Last Multiplier Method for Optimal Growth Model with The Environmental Asset
126	Ozlem Kaytmaz	A Pointwise Carleman Inequality for The General Ultrahyperbolic Schrödinger Equation
127	Abdullah Çalgınan	An Approach to The Diophantine Equations with Integer Sequences
128	Murat Çarğar	Fekete-Szegő Problem for A Subclass of BI-Univalent Functions Associated with Gegenbauer Polynomials
129	Ercan Özdemir	Bibliometric Analysis of Scientific Studies on 'Noticing Skill' in Mathematics Education
130	Ali Sabri İpek	Examination of Mathematics Questions in Secondary Education Transition Exam According to Revised Bloom Taxonomy and Middle School Mathematics Curriculum Objectives
131	Halice Polat	Reflections of Developed Problem Posing Based Active Learning Activities in The Teaching Process: Example of Fractions
132	Şükra İğtin	Receiving Student Opinions Within the Scope of Geometry Lessons Taught Using Activities Regarding Different Demonstration-Performance Methods
133	Şükra İğtin	Examining Secondary School 7th Grade Mathematics Activities Within the Scope of Harezmi Education Model and Obtaining Students' Opinions
134	Nassima Anane	Limit cycles of a class of planar polynomial differential systems
135	Sait Taş	Generating matrix and sum of Hyperbolic Fibonacci sequences
